

# Investigation of the initiation of convection and the evolution of precipitation using simulations and polarimetric radar observations at **C-** and **Ka-**band

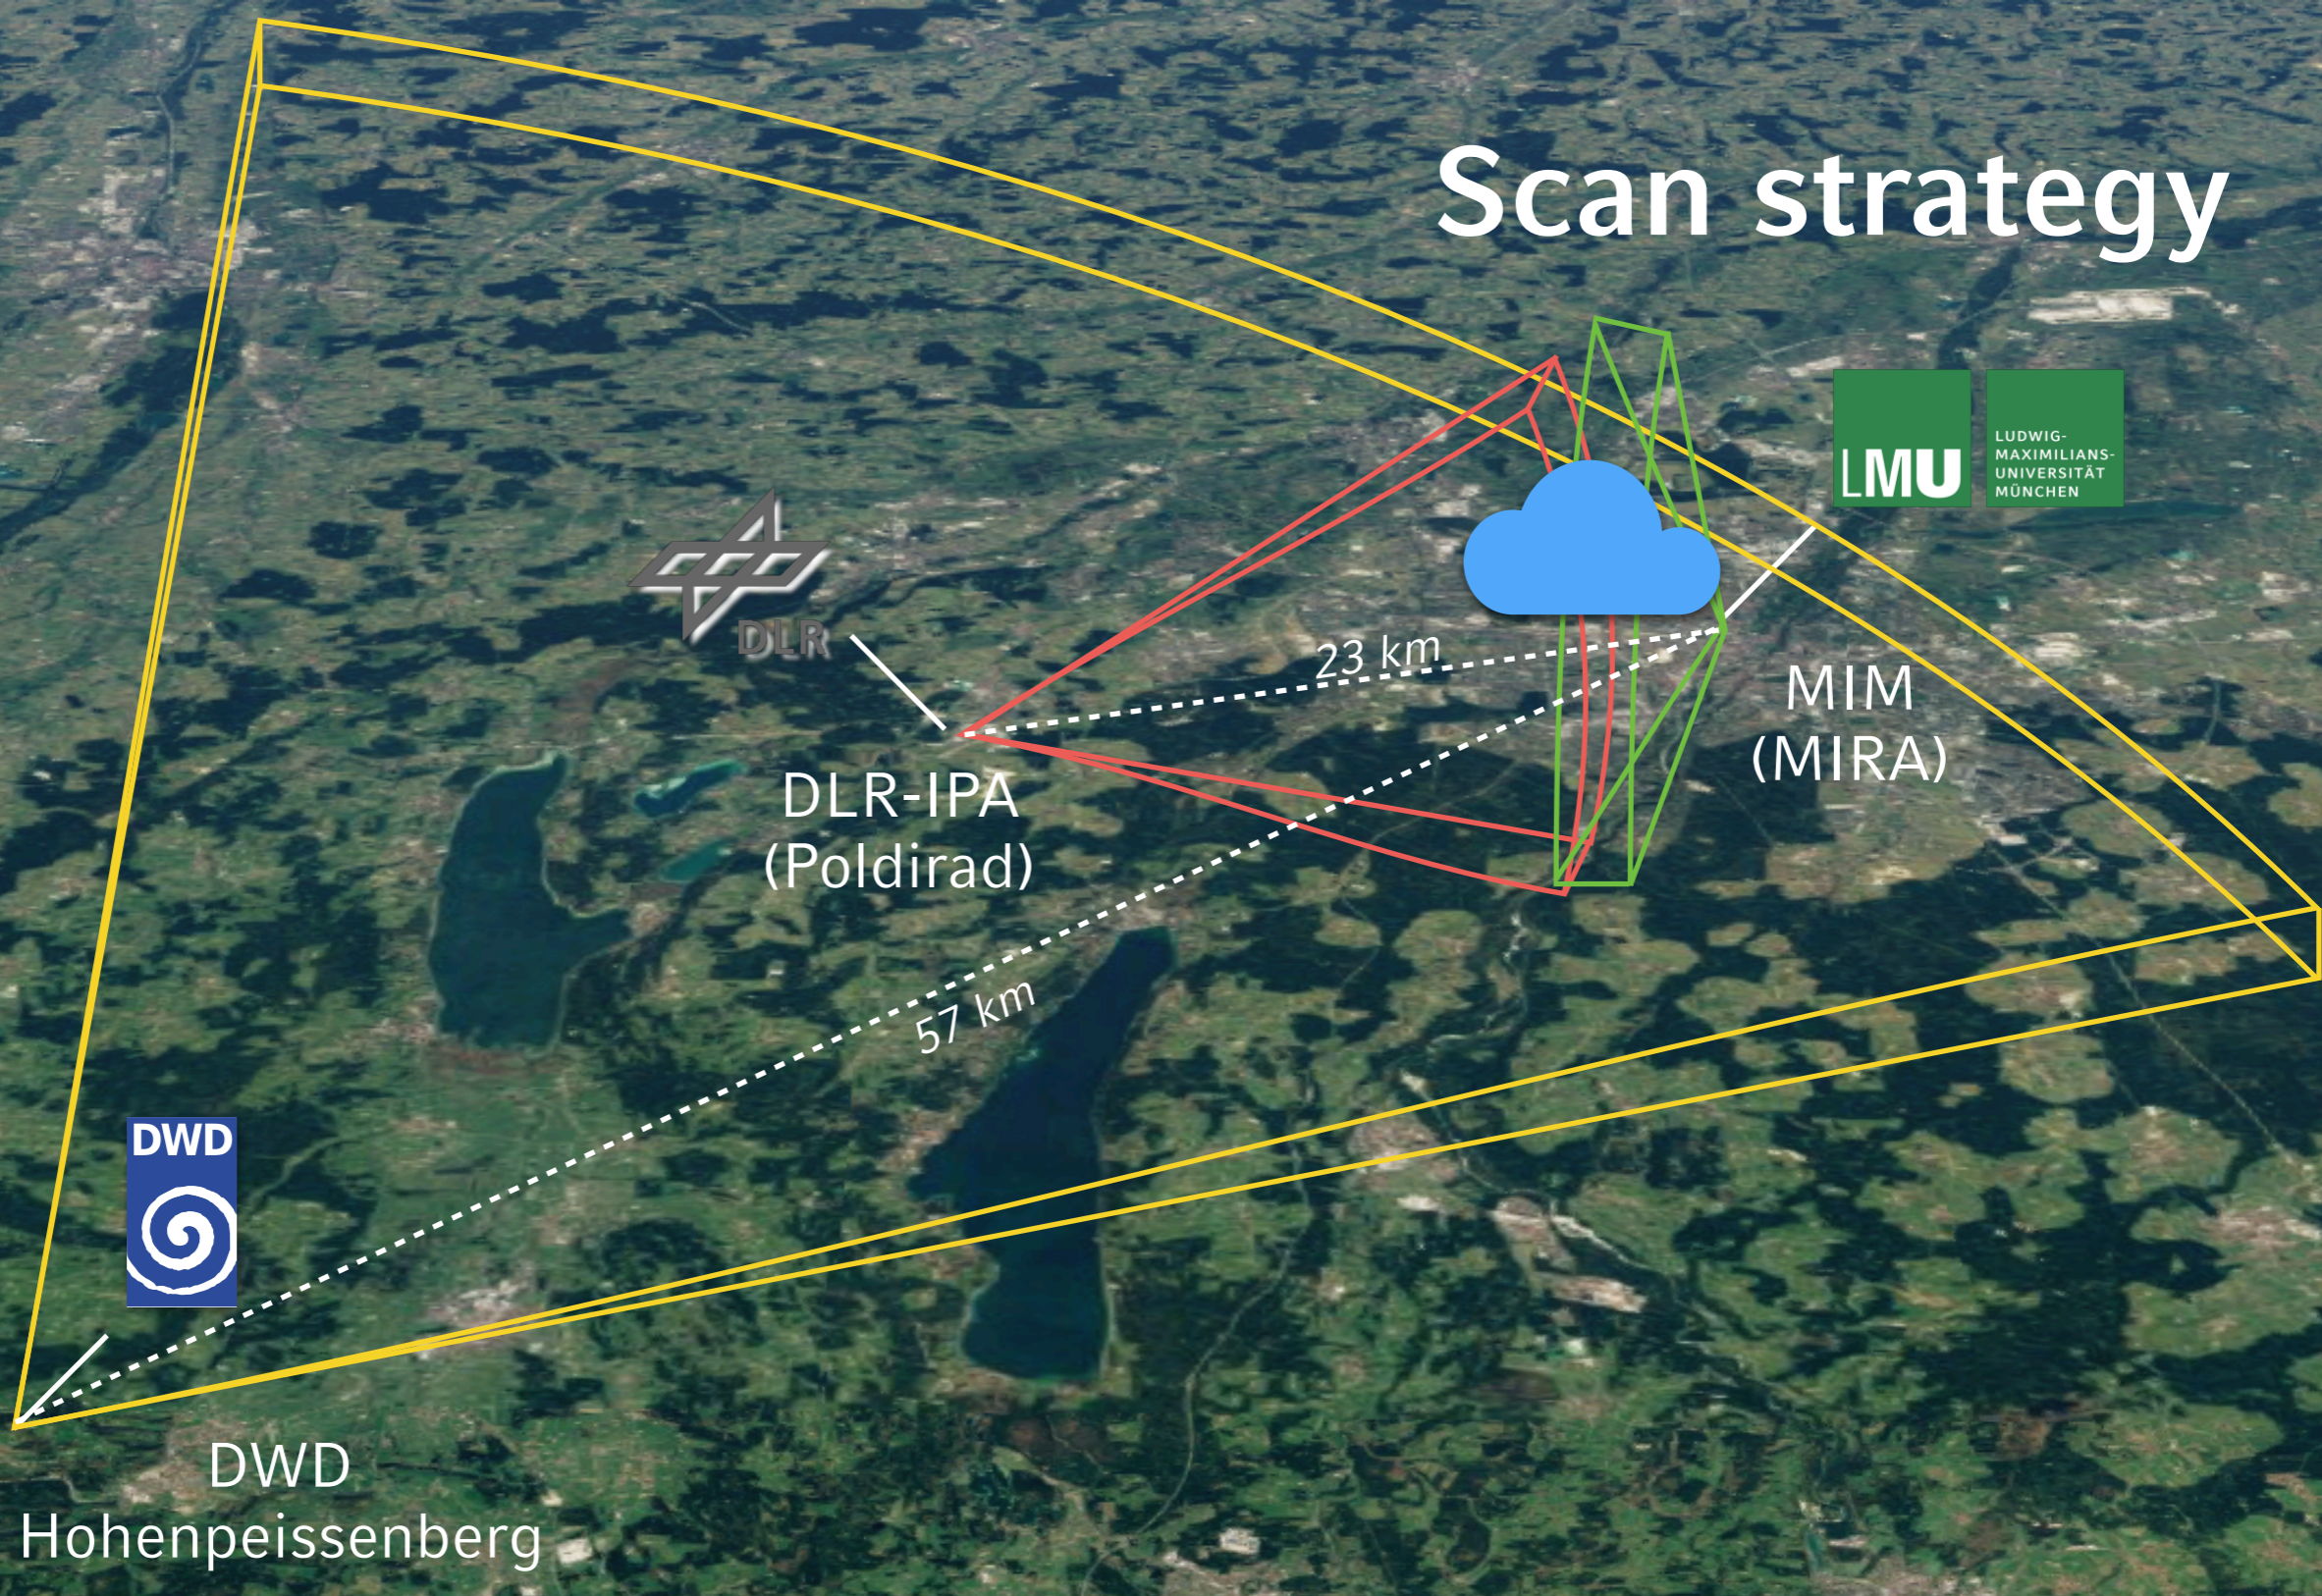

Tobias Zinner, **Christoph Knote**, Bernhard Mayer *LMU Munich*  
Martin Hagen, Florian Ewald, Silke Gross *DLR, Wessling*

# IcePolCKa work plan

# Scan strategy

automated, synchronized, cloud-tracking observations  
by Poldirad (DLR) and MIRA (MIM) - also off-axis  
supported by targeted scans from Hohenpeissenberg DWD observatory  
collaboration with Michael Frech (DWD)

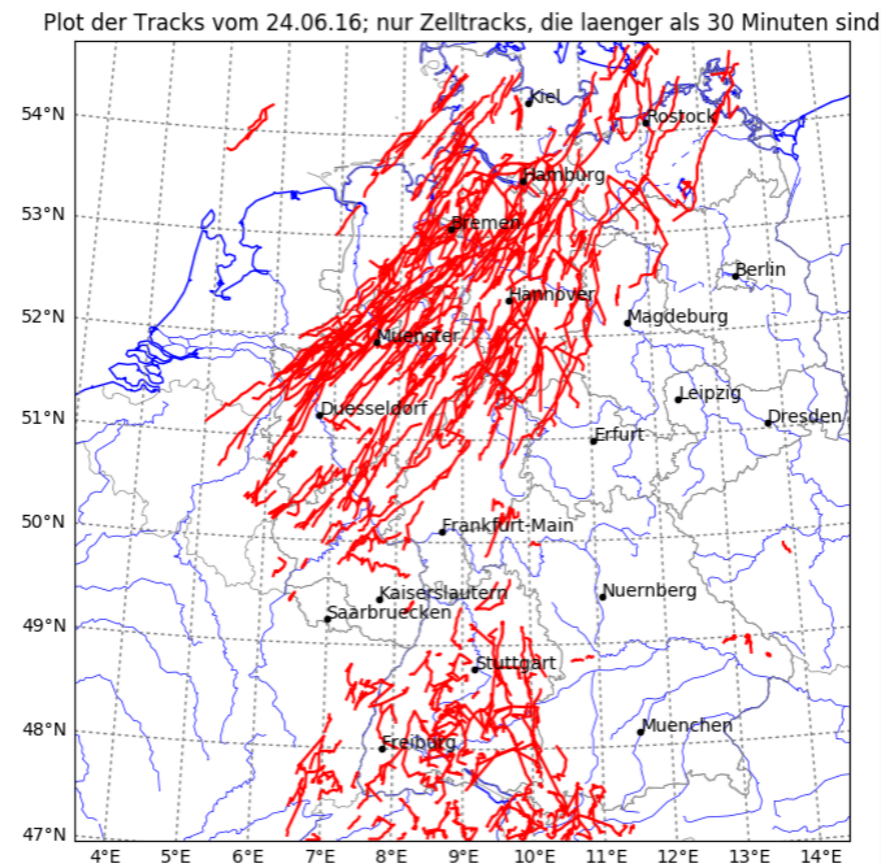

# Tracking of objects in radar, satellite, model

optical flow based automated tracking methods

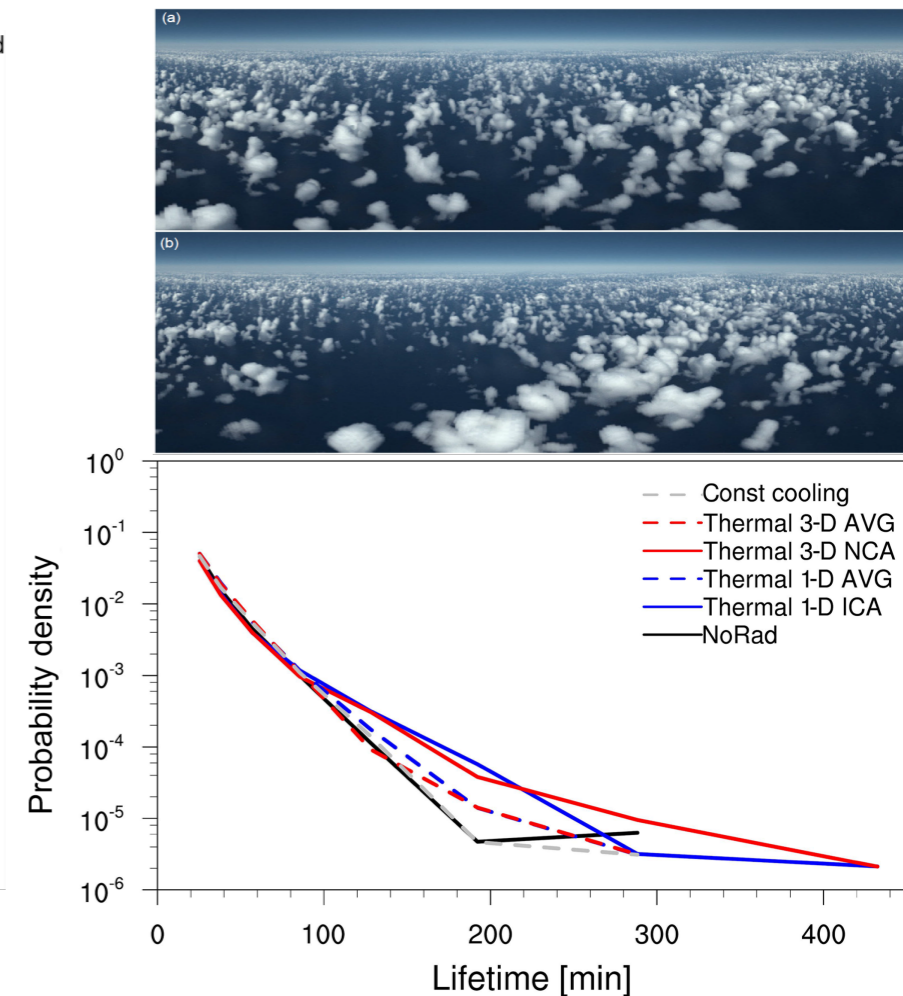

tracking of satellite cloud objects, Meteosat, 31.08.08

Cb-TRAM, Zinner et al. 2008, 2011, 2013

tracking of radar objects, DWD data, 24.06.16

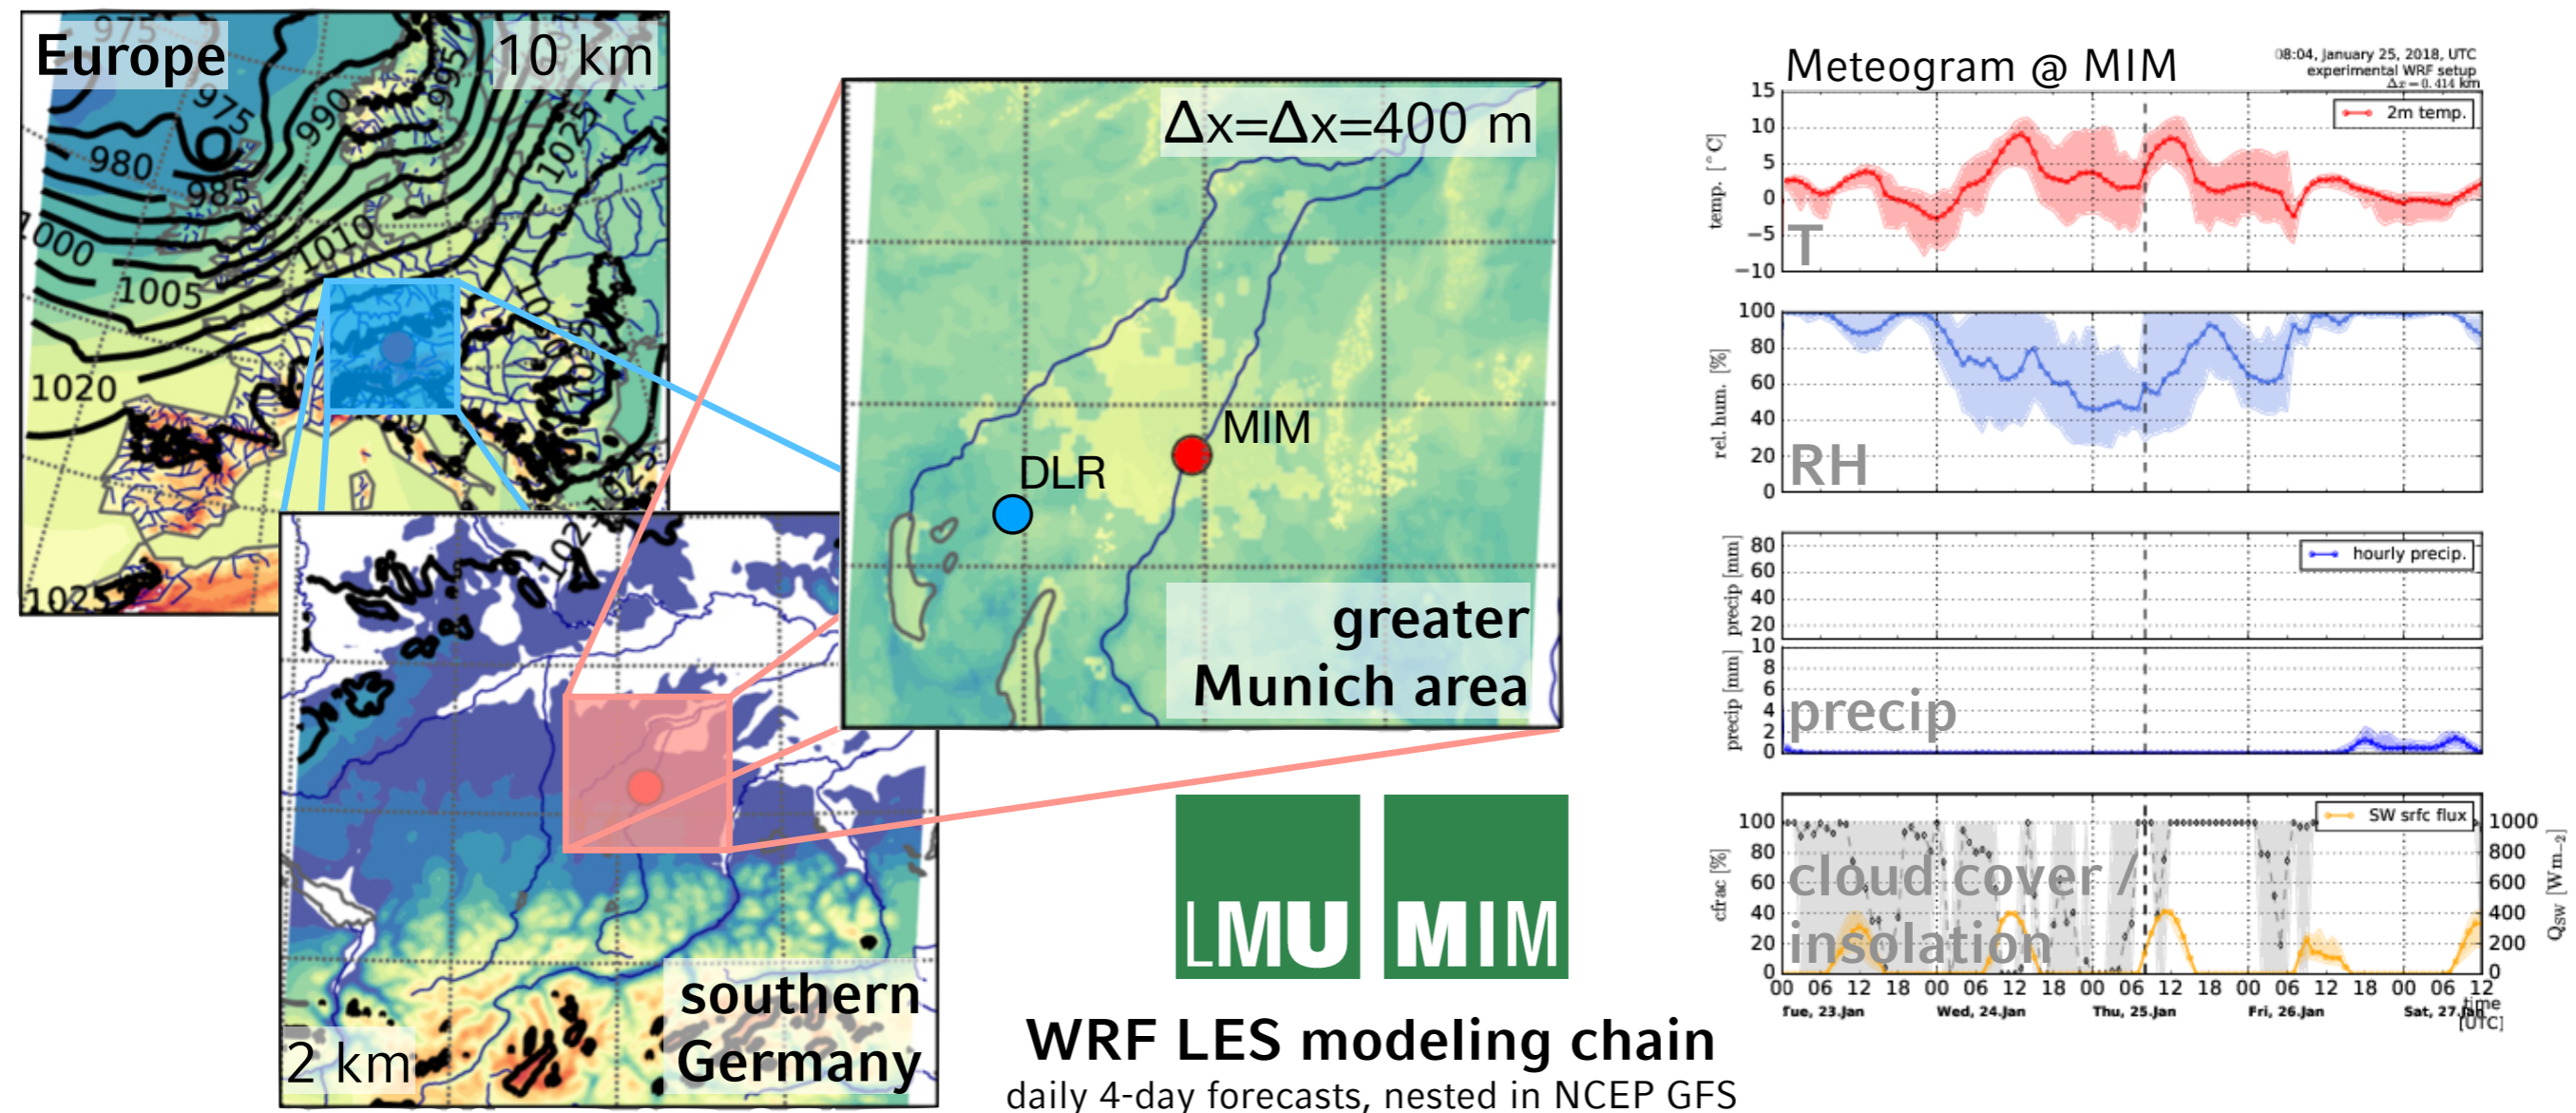

RadTRAM, Kober et al. 2009  
BSc M. Laufmann, 2017

tracking of cloud objects, in 3D model data

Klinger et al., 2017

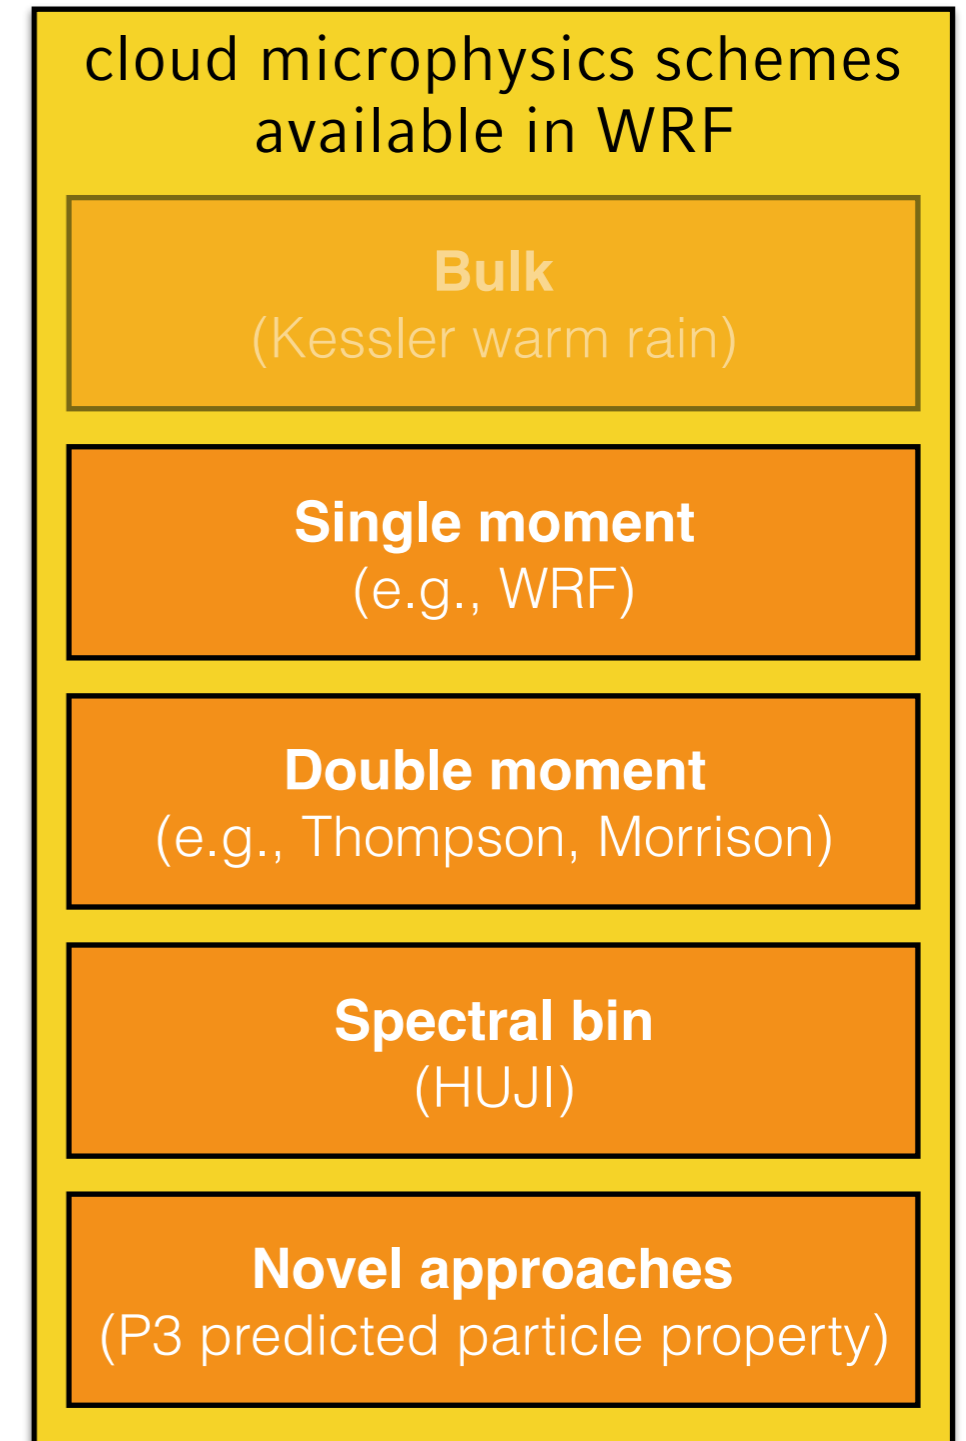

# High resolution modeling with WRF

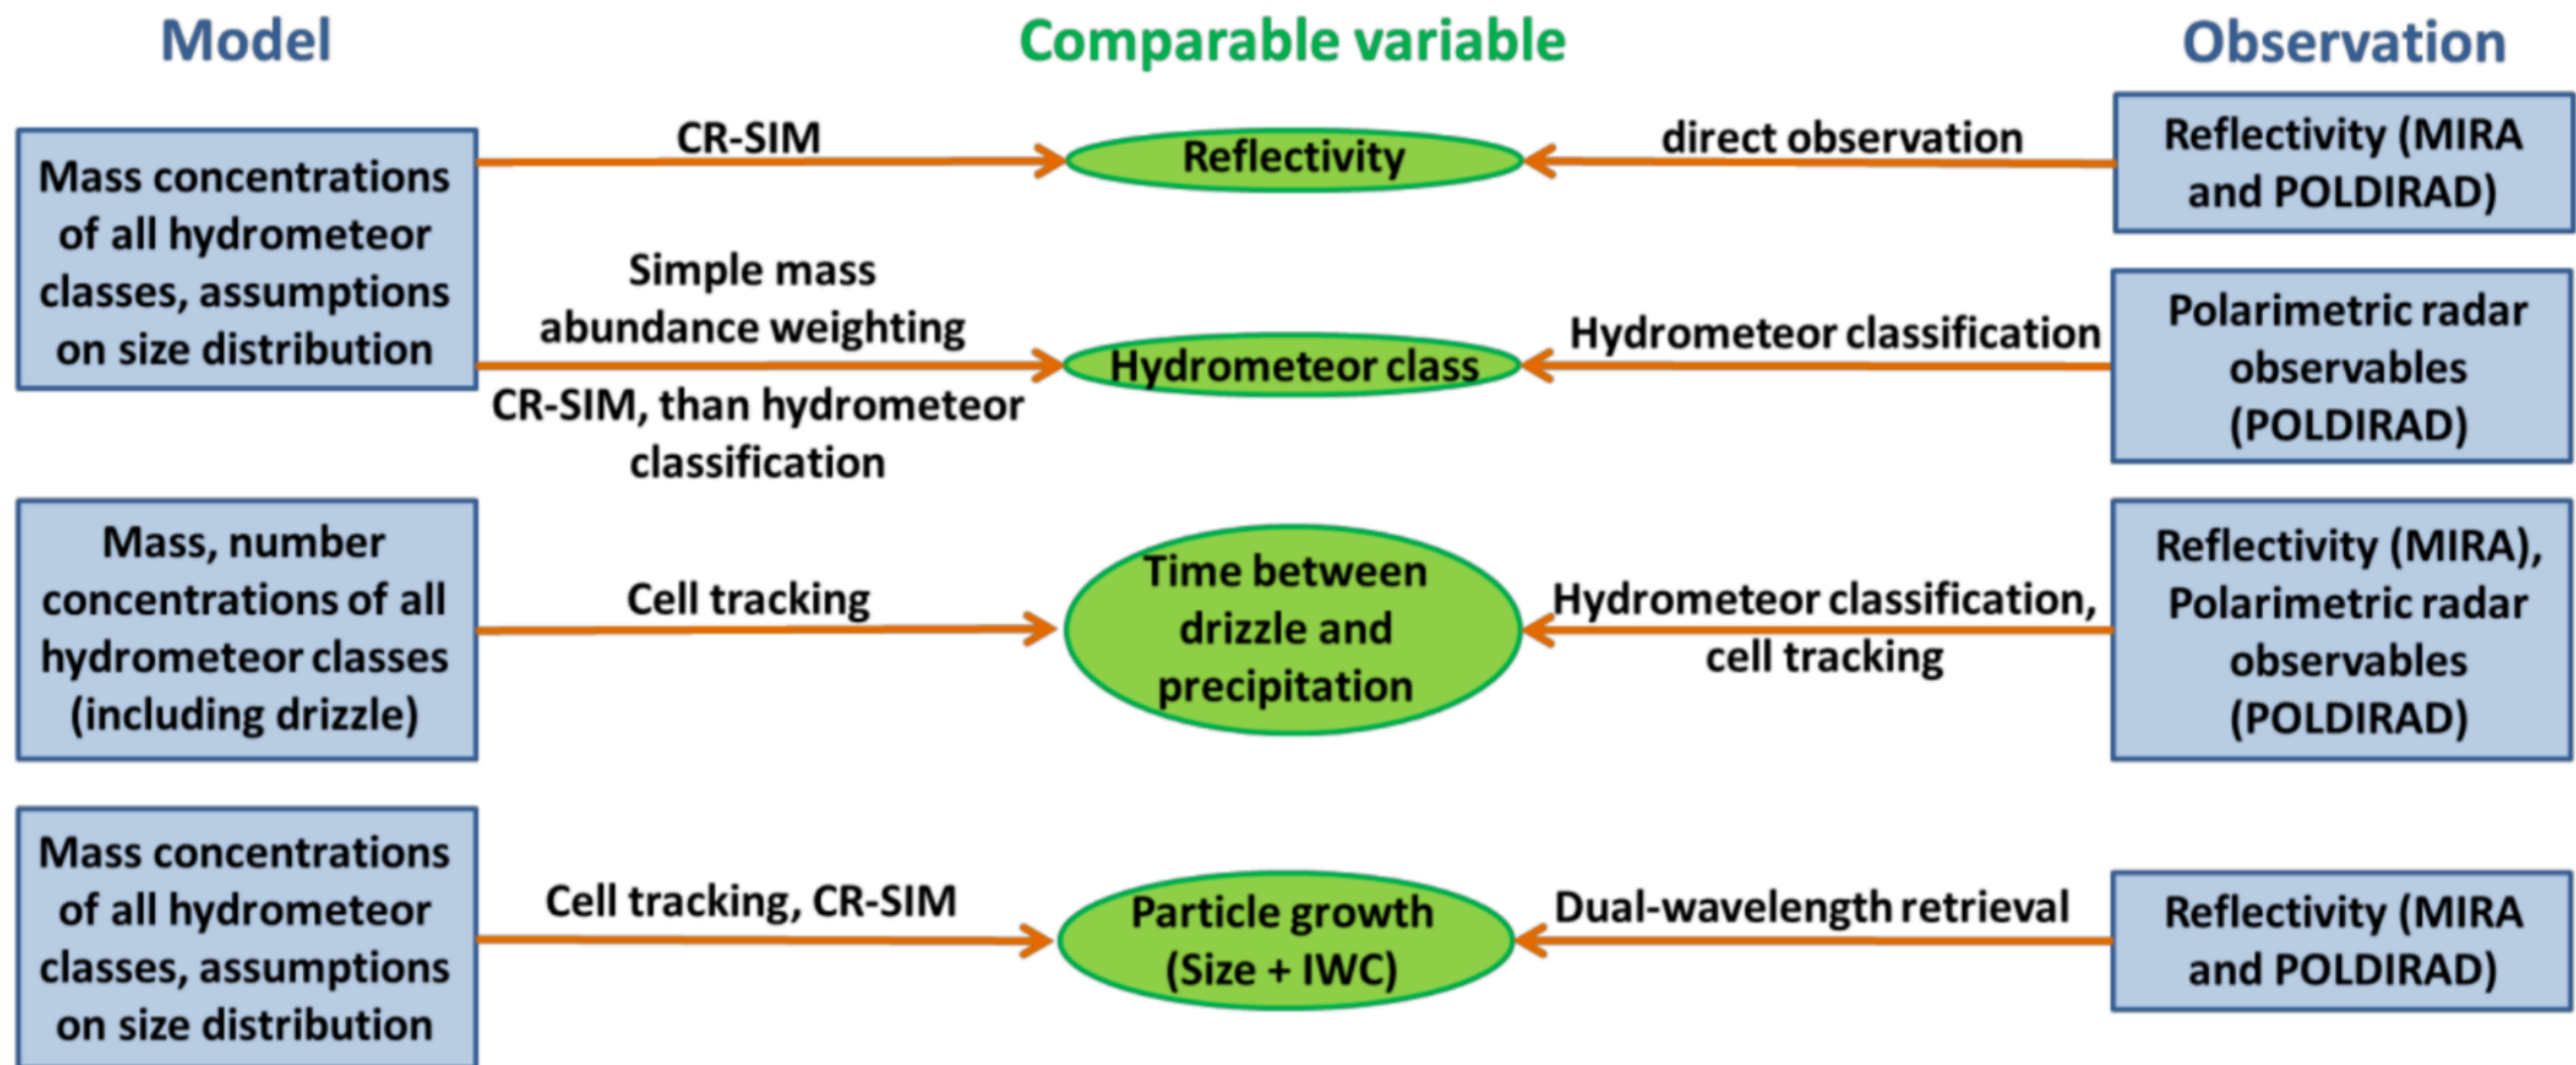

we already conduct daily 4-day WRF forecasts for internal research support and educational aspects

# Cloud microphysics scheme evaluation

- high-resolution (<1km) WRF simulations of observation periods
- identical runs, with cloud microphysics schemes of different levels of complexity
- create dataset large enough for statistical comparison with observations
- *software archeology necessary to investigate actual implementation and parameter set*

# Deriving comparable variables

# CR-SIM radar forward operator

## Cloud Resolving Model Radar Simulator (CR-SIM)

Aleksandra Tatarevic and Pavlos Kollias  
Mariko Oue

Applied Radar Science Group

[www.radarscience.weebly.com](http://www.radarscience.weebly.com)

**BROOKHAVEN**  
NATIONAL LABORATORY

*Center for Multiscale Applied Sensing*

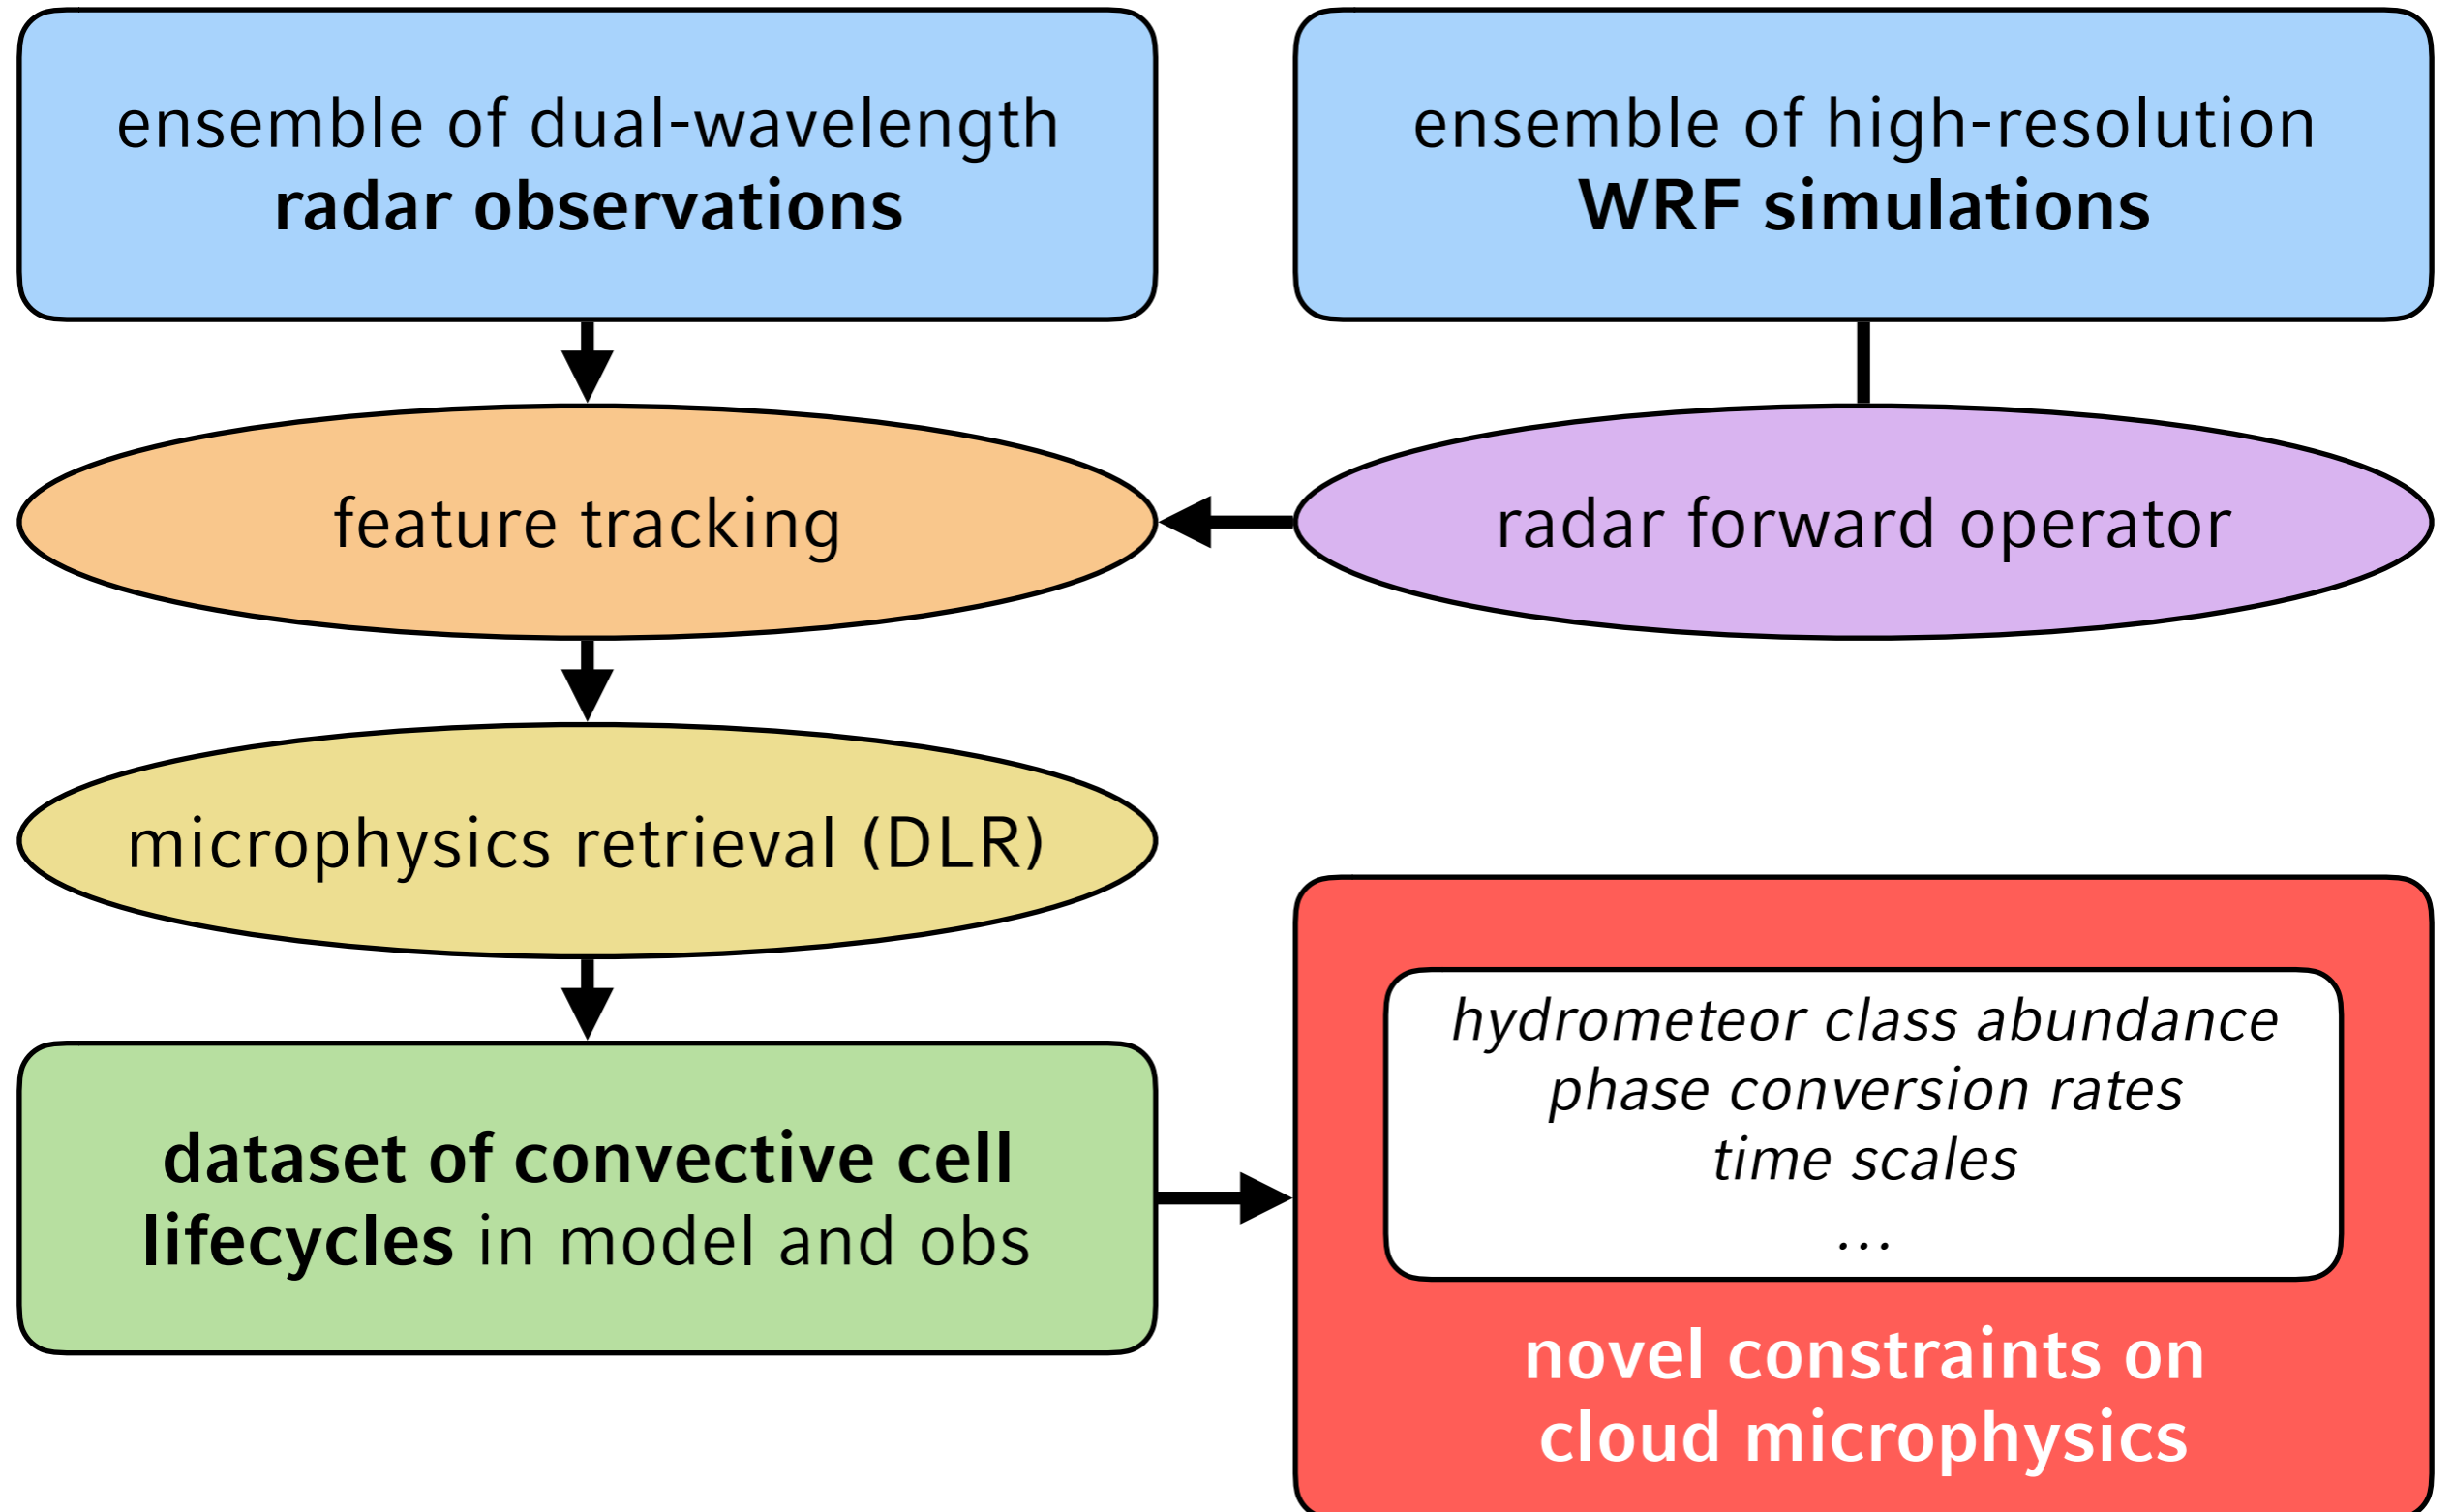

**APPLIED RADAR SCIENCE GROUP**

- well-known and tested, WRF-compatible
- ready to use data from more sophisticated microphysics schemes (double-moment, spectral bin)
- *developments will be necessary for polarimetric observations*

# Analysis workflow

# Summary

- ensemble of **polarimetric, dual-wavelength radar observations of convective cell lifecycle**
- ensemble of **numerical simulations at cloud-resolving scales**
- **evaluation of model cloud microphysics schemes** of different levels of complexity
- **scheme-independent, novel constraints for cloud microphysics scheme developments**
